New to Parallels?

Parallels is the leading provider of software solutions that maximize the usefulness of computers and servers. We call this **Optimized Computing**. Our software is running on millions of computers and serves nearly all segments.

We deliver two key technologies: **Virtualization** and **Automation**. Our **Virtualization** products allow personal computers to run several operating systems on one computer (like OSX and Windows) and for individual servers to function like many servers at once for creating **cloud computing** environments.

Our **Automation** products allow businesses to optimize their systems to maximize profit. This website was created using our **Parallels Panel** product. We all offer a full line of **Billing**, **Sitebuilder**, and **cloud computing** tools.

Please visit Parallels.com to find out more information.

Test pages

Parallels Panel SMB Edition provides several test pages that you can use for checking the scripting features, testing database connections and mail sending. Click an icon to see test pages for different scripts:

FastCGI

Python

PHP
